Prepared by: Ocean County Department of Planning, March 2016.

## Census and American Community Survey Data Notes:

Note that the Census and ACS profiles represent Ocean County. Many of the subject areas have been extracted in detail within the Data Book at the municipal level.

### Table DP-1: Comparison of Profiles of General Demographic Characteristics for Ocean County, Census 2000 – 2010

Notations reference the data on page xvi.

- [1] Other Asian alone or two or more Asian categories.
- [2] Other Pacific Islander alone, or two or more Native Hawaiian and Other Pacific Islander categories.
- [3] The Two or more races categories of White/AISN, White/Asian, White Black or African American and White/some other Race were the four most commonly reported multiple-race combinations nationwide in Census 2000. There was not enough room to list them here.
- [4] In combination with one or more of the other races listed. The six numbers may add to more than the total population, and the six percentages may add to more than 100 percent because individuals may report more than one race.
- [5] This category is composed of people whose origins are from the Dominican Republic, Spain, and Spanish-speaking Central or South American countries. It also includes general origin responses such as "Latino" or "Hispanic."
- [6] "Spouse" represents spouse of the householder. It does not reflect all spouses in a household. Responses of "same-sex spouse" were edited during processing to "unmarried partner." In 2010, "Married couple family" was changed to "Husband-wife".
- [7] "Family households" consist of a householder and one or more other people related to the householder by birth, marriage, or adoption. They do not include same-sex married couples even if the marriage was performed in a state issuing marriage certificates for same-sex couples. Same-sex couple households are included in the family households category if there is at least one additional person related to the householder by birth or adoption. Same-sex couple households with no relatives of the householder present are tabulated in nonfamily households. "Nonfamily households" consist of people living alone and households which do not have any members related to the householder.
- [8] The homeowner vacancy rate is the proportion of the homeowner inventory that is vacant "for sale." It is computed by dividing the total number of vacant units "for sale only" by the sum of owner-occupied units, vacant units that are "for sale only," and vacant units that have been sold but not yet occupied; and then multiplying by 100.
- [9] The rental vacancy rate is the proportion of the rental inventory that is vacant "for rent." It is computed by dividing the total number of vacant units for rent by the sum of the renter-occupied units, vacant units that are "for rent," and vacant units that have been rented but not yet occupied; and then multiplying by 100.

## 2010-2014 American Community Survey 5-Year Profiles:

### General American Community Survey Data Notes:

1. Source: U.S. Census Bureau, 2010-2014 American Community Survey 5-Year Estimates, released December 2015.
2. Up to and including Census 2000, detailed demographic and economic data was collected by the US Census Bureau in the decennial censuses through the long form. For Census 2010, the long form was replaced by the American Community Survey (ACS), a more frequent survey with a smaller sample size. Note that data is approximate due to margin of error.

3. Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.
4. Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.
5. Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.
6. Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.
7. Fertility data are not available for certain geographic areas due to problems with data collection. See Errata Note #92 for details.
8. Methodological changes to data collection in 2013 may have affected language data for 2013. Users should be aware of these changes when using multi-year data containing data from 2013.
9. The Census Bureau introduced a new set of disability questions in the 2008 ACS questionnaire. Accordingly, comparisons of disability data from 2008 or later with data from prior years are not recommended. For more information on these questions and their evaluation in the 2006 ACS Content Test, see the Evaluation Report Covering Disability.
10. While the 2010-2014 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.
11. Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.
12. Explanation of Symbols:
  - An '\*' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
  - An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
  - An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
  - An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
  - An '\*\*\*\*' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
  - An '\*\*\*\*\*' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
  - An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
  - An '(X)' means that the estimate is not applicable or not available.

### **DP03: SELECTED ECONOMIC CHARACTERISTICS for OCEAN COUNTY**

1. Workers include members of the Armed Forces and civilians who were at work last week.
2. Industry codes are 4-digit codes and are based on the North American Industry Classification System (NAICS). The Census industry codes for 2013 and later years are based on the 2012 revision of the NAICS. To allow for the creation of 2009-2013 and 2011-2013 tables, industry data in the multiyear files (2009-2013 and 2011-2013) were recoded to 2013 Census industry codes. We recommend using caution when comparing data coded using 2013 Census industry codes with data coded using Census industry codes prior to 2013. For more information on the Census industry code changes, please visit our website at <http://www.census.gov/people/io/methodology/>.
3. Occupation codes are 4-digit codes and are based on the Standard Occupational Classification (SOC) 2010. The 2010 Census occupation codes were updated in accordance with the 2010 revision of the SOC. To allow for the creation of 2006-2010 and 2008-2010 tables, occupation data in the multiyear files were recoded to 2013 Census occupation codes. We recommend using caution when comparing data coded using 2013 Census occupation codes with data coded using previous Census occupation codes. For more information on the Census occupation code changes, please visit our website at <http://www.census.gov/hhes/www/ioindex/>.

### **DP04: SELECTED HOUSING CHARACTERISTICS for OCEAN COUNTY**

1. Households not paying cash rent are excluded from the calculation of median gross rent.
2. Telephone service data are not available for certain geographic areas due to problems with data collection. See Errata Note #93 for details.

**Notations reference the data on page xix.**

- [1] Excluding units where SMOCAPI cannot be computed. (SMOCAPI = Selected Monthly Owner Costs as a Percentage of Household Income.)
- [2] Excluding units where GRAPI cannot be computed. (GRAPI = Gross Rent as a Percentage of Household Income.)
- [3] The median gross rent excludes no cash renters.

#### **Additional Table Notes:**

1. SMOCAPI = Selected Monthly Owner Costs as a Percentage of Household Income.
2. GRAPI = Gross Rent as a Percentage of Household Income.
3. In prior years, the universe included all owner-occupied units with a mortgage. It is now restricted to include only those units where SMOCAPI is computed, that is, SMOC and household income are valid values.
4. In prior years, the universe included all owner-occupied units without a mortgage. It is now restricted to include only those units where SMOCAPI is computed, that is, SMOC and household income are valid values.
5. In prior years, the universe included all renter-occupied units. It is now restricted to include only those units where GRAPI is computed, that is, gross rent and household income are valid values.
